## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-2 and 7-27 are rejected under 35 U.S.C. 102(b) as being anticipated by Akgun et al. (Akgun) P.N. 5,596,303.

Akgun discloses a superconductive magnet for MRI. Applicant's attention is directed to Fig. 1 and corresponding description. The magnet system includes conventional superconductive coils 8 and 9 and correction or field-shaping coils 10 that are disposed between the conventional coils and the patient bore. A gradient coil assembly 6 is associated with the patient bore. Note that conventional coils and correction coils are in separate vessels and that correction coils (or rings) are made of high temperature superconducting material.

### ***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 3-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Akgun as applied to claim 1 above, and further in view of Joseph P.N. 6,456,076.

Art Unit: 2859

The only difference between the prior art as represented by Akgun and the claims at issue is the use of a shielded gradient coil. The use of such shielded gradient coils in MRI systems is well known as advantageous in the art. See the teachings found in Joseph's background of the invention, pertaining to the use of shielded gradient coils to avoid the generation of deleterious eddy currents. To make the gradient coils of Akgun, shielded gradient coils, would have been obvious to the artisan of ordinary skill.

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Dorri et al. '292 and '110 and Westphal et al. all disclose magnet systems having supplemental magnetic field shaping coils that reside between the main coils and the patient bore. Note the abstract and drawings in each of the disclosures.
